Assignment-2

Introducing Relational Databases.
1) Which field of the Customers table is the primary key?
There is no primary key defined.

2) What is the 4th column of the Customers table?
customer name.

3) What is another word for row? For column?
Row = Record, Tuple, Entry, Observation
Column Field, Attribute, Property, Variable

4) Why isn't it possible to see the first five rows of a table?
-> rows in a table are not guaranteed to be stored or retrieved in any specific order unless you explicitly sort them using an ORDER BY clause.

-> so when we retrieve the five data there is no guarantee that the 5 row which are inserted first will be displayed as the output.
